Hiring Manager

[Company Name]

[Company Address]

Subject: Application for Web Developer Position

Dear Hiring Manager,

I am writing to apply for the Web Developer position at [Company Name] that I found on **LinkedIn**. I am a Computer Science student at Beirut Arab University with strong skills in web development and a passion for building functional, user-friendly applications.

I have experience working with both frontend and backend technologies. I am proficient in HTML, CSS, JavaScript, PHP, and React, and have built full-stack web applications using Bootstrap 5, MySQL, and PDO. In my project SpeedXpo, a premium car marketplace, I developed a responsive platform with secure user authentication, CSRF protection, and full CRUD operations. I also built a Building Management System and a Car Renting System using Java, which strengthened my understanding of Object-Oriented Programming and GUI development.

In addition to web development, I have knowledge in cybersecurity and machine learning. I completed a project on Malware Detection using Static Analysis and Machine Learning with Python, where I worked with SVM and Decision Tree classifiers. I am also familiar with security concepts like HTTP/HTTPS, API security, and CORS.

My goal is to combine web development with AI to create intelligent applications that deliver powerful user experiences. I am a fast learner, a strong problem solver, and work well in teams. I am looking for a dynamic environment where I can grow and contribute meaningfully.

I have attached my CV for your review. I would appreciate the opportunity to discuss how my skills can benefit your team.

Thank you for your time.

Sincerely,

Marwan Issa
